Ochirtulga Namjim

Java Backend Engineer | Spring Boot, Microservices, AWS
Austin, TX | (737) 334-5878 | ochirtulgan@gmail.com
linkedin.com/in/ochirtulga | github.com/ochirtulga

SUMMARY

Java backend engineer with 8 years building and operating scalable, cloud-native Spring Boot microservices and REST APIs for enterprise platforms serving millions of users. Designs services end to end, from database schema and API contract through CI/CD deployment on AWS, monitoring, and production support. Owns delivery, reviews teammates' code and security findings, optimizes hot paths and resource use, and mentors engineers on distributed systems and data modeling. Cut guaranteed SLA downtime on a revenue-critical service from roughly 2,000 minutes a year to 20.

EXPERIENCE

AI Training Engineer
Stellar AI, Remote, United States
Feb 2026 - Present

- Debug and resolve defects in end-to-end systems, isolating root causes across the service, integration, and data layers.
- Review and convert pull requests from major open-source Java and Python projects, including Checkstyle and Black, into structured engineering tasks.
- Author automated verifiers and evaluation criteria so changes are validated programmatically against objective pass and fail conditions.

Software Engineer (Remote, Part-time)
Express Window LLC, Erdenet, Mongolia
Apr 2026 - Present

- Built an internal order and inventory management tool on Java Spring Boot, React.js, and AWS, owning it end to end from database schema and REST API contract through deployment.

Backend Engineer, Enterprise E-Commerce and Platform Services
Thermo Fisher Scientific, Austin, TX
Oct 2023 - Mar 2025

- Built and operated Java Spring Boot microservices powering the enterprise e-commerce website and supporting platforms, including notifications, scheduler, and user access management, deployed on AWS EKS behind an API gateway handling throttling and request tracing.
- Co-designed and implemented a new User Access Management service with Spring Security, owning the design through schema, REST API contract, and rollout, and refactored core services including order history, subscriptions, reserves, and email notifications.
- Optimized the order history service by moving it from synchronous to asynchronous processing over Kafka topics, cutting API response time by 50 percent.
- Integrated every service into automated security vulnerability scanning in GitHub Actions CI/CD, surfacing and fixing issues early and reducing production security findings.
- Built middleware between existing Java microservices to smooth the organization's migration toward Python, reducing integration defects across the two stacks.

Data Engineer, Customer Data Platform
Thermo Fisher Scientific, Austin, TX
Sep 2022 - Oct 2023

- Improved pipeline performance and resource utilization by replacing per-session database connections with connection pooling, and improved maintainability by introducing JAXB classes for every XML template.
- Built tooling that cut operator error, including a pre-run validation script that flags bad input before processing starts and an initialization interface that reduced setup errors from roughly 3 or 4 in 10 runs to about 1 in 10.

Full-Stack Developer, E-Commerce
Thermo Fisher Scientific, Austin, TX
Jul 2022 - Sep 2022

- Delivered features during an Angular legacy-to-modern migration and built the backend test automation and mock data the team relied on throughout.

Software Engineer
Khan Bank, Ulaanbaatar, Mongolia
Aug 2019 - Sep 2021

- Migrated the SMS notification service to a Kafka-based Spring Boot microservice on Cassandra, cutting guaranteed SLA downtime from roughly 2,000 minutes per year to 20, and earning recognition from the Head of IT.
- Stood up the bank's first Kafka cluster, establishing event streaming and asynchronous messaging as the foundation for real-time data movement between systems.
- Led and delivered a behavioral loan-scoring platform with PySpark pipelines moving data from Oracle into Spark and Hadoop, cutting loan approval time from 3 days to 3 hours; nominated as one of the bank's projects of the year.
- Mentored and trained a developer and a data-analyst team on the new distributed platform, and supported them throughout my tenure.

Database Administrator
Khan Bank, Ulaanbaatar, Mongolia
Feb 2018 - Aug 2019

- Designed and built the bank's first distributed, multi-layer data platform on Cassandra, Spark, and Hadoop, replacing legacy reporting and analytics and cutting platform licensing costs by roughly 50 percent.
- Designed schemas and tuned queries across Oracle, PostgreSQL, and MSSQL for all core subsystems, covering indexing, performance tuning, backups, and zero-downtime patching and upgrades.
- Built the bank's first change data capture pipeline (Oracle GoldenGate, Oracle to MSSQL), replicating source data downstream in near-real time with zero load on the source databases.
- Recognition: department's Best Young Employee, a 200 percent KPI performance bonus, and first place in the bank's internal information-security competition.

SKILLS

Backend and Web: Java, Spring Boot, Spring Security, Spring Data JPA, Hibernate, JPA, REST APIs, RESTful web services, web frameworks, microservices, event-driven architecture, API design and specification, FastAPI, Node.js, React.js, Angular
SQL Databases: Oracle, PostgreSQL, MSSQL, MySQL, schema design, indexing, query optimization, transaction management
NoSQL and Caching: Apache Cassandra, Redis, DataStax Enterprise
AWS and Cloud: AWS EC2, EKS, Lambda, S3, IAM, Secrets Manager, CloudFront, Route 53, ACM, Docker, Kubernetes, Linux (RHEL, Ubuntu)
Messaging and Queues: Apache Kafka, asynchronous messaging, publish and subscribe, notification services, Apache Spark, Apache Hadoop, change data capture
Monitoring and APM: Grafana, Prometheus, ELK, metrics, logging, alerting, application performance monitoring and profiling
DevOps and CI/CD: GitHub Actions, Jenkins, Git, Maven, Gradle, Artifactory, Ansible, automated build, test, and deployment pipelines
Practices: system design, high-level and low-level design, API specifications, database schema design, code review, security review, technical documentation, performance optimization, mentoring, Agile delivery
Languages: Java, Python, SQL, Perl, Bash, JavaScript

CERTIFICATIONS

AWS Certified Solutions Architect - Associate, 2026
Apache Cassandra Developer - Associate, 2019

EDUCATION

Master of Science, Computer Science and Engineering
American National University, Salem, VA
Expected 2028

Master of Science, Computer Science
Maharishi University of Management, Fairfield, IA
2023

Bachelor of Science, Information Technology
Mongolian University of Science and Technology, Ulaanbaatar, Mongolia
2018
